LUNKER HUNTER SPOONPLUGGERS MEETING APRIL 4, 2013

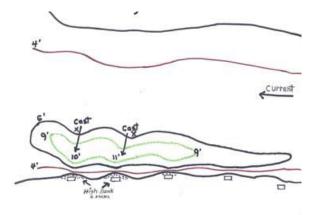

"SMALLMOUTH BASS ON THE GRAND RIVER"

20 inch smallmouth bass from the Grand River

The program was a discussion of fishing for smallmouth bass in the Grand River. It is definitely an under fished resource. A map handout of the river structures in the area of the Rogue River launch was passed out with a specific structure (#2) drawn on the back in detail. Chase described how he would troll this river structure with different sized Spoonplugs to gather information and draw a detailed map. He noted that trolling passes upstream would differ in depth from trolling passes downstream with the same size Spoonplug and gave the depth that could be expected with each. Once a structure map has been drawn, it is a simple matter to determine the best spots for casting by noting the deepest water and features relating to it. Anchoring and casting with Spoonplug, crankbaits, bladebaits, and jigs will then check the area for most depths and speeds. When fishing any river, one must be aware of water depth enough to run the boat safely, but Buck Perry could always tell the better Spoonpluggers by checking their motor propeller. If it was dinged up, they were following guidelines, procedures, and running the 500 properly! Make sure you bring your lure knocker along, although the Grand usually does not present a big problem with snags. The Grand River is close by where the Muskegon Outing is held and would be a good option to try fishing. Current and water color are 2 advantages of a river over most lakes, especially under cold front conditions. Spring Lake is a bayou of the Grand River with access to the river itself.

Chase Klinesteker

Drawn map after trolling river hole with 1st 3 sizes of Spoonplugs
